

Create App

```
import { createApp } from 'vue'  
// import the root component App from a single-file component.  
import App from './App.vue'  
  
const app = createApp(App)
```

This App needs to be mount to an `<div>` that will represent the root component

Errorhandling of App Problems

```
app.config.errorHandler = (err) => {  
  /* handle error */  
}
```

```
const app1 = createApp({  
  /* ... */  
})  
app1.mount('#container-1')  
  
const app2 = createApp({  
  /* ... */  
})  
app2.mount('#container-2')
```

Multiple Apps can rendered on the same page
